Art Unit: 2827

DETAILED ACTION

1. Claims 1-19 are presented for examination.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1-19 are rejected under 35 U.S.C. 101 because the claimed invention is not supported by either a specific and substantial asserted utility, a credible asserted utility or a well established utility.

Applicant does not support any a specific of "a memory", "N", "a plurality of line data", writing and reading operation in claim 1, etc..

First at all, claims do not specific size of "a memory". For example, "a memory cell" can't divide into N memory blocks.

Second, "receiving a plurality of line data". Claims do not disclose what is used to receive line data and how to transfer data value to a memory.

Regarding claim 1, "N integer" does not define being an odd number or even number is used.

Application/Control Number: 10/711,573 Page 3

Art Unit: 2827

Regarding claims 3, 7, 13, 16, as claim 1 disclosed after writing more than N/2 + 1, read operation is started. However, claims 7, 13 and 16 disclosed that the reading step is started at after writing of N/2 + 2. It is unclearly.

Claims 1-19 also rejected under 35 U.S.C. 112, first paragraph. Specifically, since the claimed invention is not supported by either a specific and substantial asserted utility, a credible asserted utility or a well established utility for the reasons set forth above, one skilled in the art clearly would not know how to use the claimed invention.

- 5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 6. Claims 1-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 7. A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely

Art Unit: 2827

exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claims 1-19 recites the broad recitation a memory, N of claim 16, and the claim also recites after writing more than N/2+1 memory blocks, starting to read in claim 1, but in claim 4 dependents from claim 1, the reading step started at N/2+1, these are invalid claims, an apparatus in claim 18-19..etc. which is the narrower statement of the range/limitation.

Regarding claims 1-19, claims contain the contents are considered infinite. For example, the claim invention is *a method for accessing memory in independent claim 1, or an apparatus in claim 19,* but the claimed invention has not been disclosed nowhere how to access a memory, claims just contain limitations *when* for reading and writing operations of a memory. More specifically, claims do not specific, which is an apparatus, is used to perform the method in claim 19. Only a single port memory cannot use to do anything in a memory device.

Regarding claim 19, an apparatus claim can't dependent from a method claim.

Regarding claims 18-19 contain not enough information of an apparatus to use to read or write a memory device. According to claims 18-19, it is just a type memory with single port memory only. Applicant disclosed no drawing to show an apparatus uses to read or writing operations in device.

As described above, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired.

Claims must be amended clarity for one skilled in the art clearly know how to use the claimed invention, and drawings must including all elements, functions that include in claim, which claim regards as claimed invention.

Conclusion

As discussed above, claims 1-19 are required to amend for clarity, and claim should be a valid claim, which one skill in the art can understands claimed invention, the resulting claim must clearly set forth the metes and bounds of the patent protection desired.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thong Q. Le whose telephone number is 571-272-1783. The examiner can normally be reached on 8:00am-5:00pm M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Zarabian Amir can be reached on 571-272-1852. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
